SMT Hosts Interactive BBQ Lunch

Last August Safe Marine Transfer hosted an informative BBQ lunch for potential customers at Seanic Ocean Systems in Katy, Texas. This occasion gave customers and guests an opportunity to view and interact with SMT's patented all-electric dual barrier subsea storage and injection units. Attendees were welcomed by Mike Brown (CEO – LSPI), Art Schroeder (CEO – SMT), and Subsea 7 representatives. During the BBQ, guests learned about the subsea storage unit's deployment and recovery process and received answers to questions regarding LSPI's market-leading drag reducing agents (DRA) and SMT's solution to significantly increase subsea well tieback production.

If you are interested in learning more about our full-service solutions for subsea production increase and the opportunity to view and interact with the prototype of our DRA Subsea Injection Unit, visit: www.safemarinetransfer.com and click on the Contact Us button to request more information.

Together, SMT, LSPI and Subsea 7's ability to bring a combination of proven applications, market leading technology, and industry expertise to increase subsea production has also earned SMT a spot as a 2021 finalist for World Oil's Best Deepwater Technology Award.
